

School Nurse Algorithm

***RE-EXPOSURE:** After completing their isolation period, individuals that tested positive for COVID-19 via PCR test will not need to quarantine or isolate if exposed again for at least 3 months from their test or symptom onset date.

***TEST TYPE:** individuals are encouraged to verify with the test site if the test they are receiving is PCR or an antigen test. Negative antigen tests are not sufficient to clear an individual to return to school under Scenario 2's test strategy.
